In love with design, in love with data

More than 12 years of crafting beautiful Web Pages and User Interfaces for web applications.

I have a strong understanding of responsive web. I write clean and commented HTML5, CSS3 and JS (ES5) code. I can work with (integrate, edit and optimize) any graphic format used (JPG, PNG, SVG, Font-icon ..). I am advanced user of Photoshop and Illustrator.

I am proficient with responsive frameworks such as Bootstrap and Foundation. List of libraries, frameworks and plugins I've been using is endless.

If you are using some technology stack I am not familiar with, I am always, always keen to learn something new. Examples of something I have learned recently: MeteorJS certificate & MongoDB certificate.

I know foundations of Node, Express, Meteor, Angular(1.x) and React.

On projects I am working, I came up with solutions not excuses. I am reliable developer and person and will be a great member of your team.

Although my main focus is on design, I like to work with data as well. I am familiar with various RESTful services and know how to create, fetch, update, delete, remove and parse data (CRUD). I know how to parse data with raw Javascript and with libraries such as Underscore and Lodash.

I am familiar with tools used in modern web development such as NPM, Bower, Gulp, Grunt, Browser-sync etc.

I am proficient with Git and Github and have pushed plenty lines of code to public and private Github repositories.
